

iQ WiFi Heating Element

Re-define control of your designer radiator or towel rail with the Ecostrad iQ WiFi Heating Element. This ground-breaking heating element is the first of its kind to feature WiFi control, enabling program and temperature setting from anywhere in the world. Intuitive in-room control is provided through the stylish display, while dual thermostats facilitate both ambient control over the room and internal temperature management for towel-drying and LST options.

Technical Details

Display dimensions	66x66x50mm (WxHxD)
Colour	Chrome
Installation	Hardwired professional installation only. No fitted plug.
Connection thread	G ½ inch
Cable length	1.5m
Voltage	220-240V, 50Hz
Protection	IPX4, Class I
Warranty	2 years
Certifications	 

Compatibility

The Ecostrad iQ WiFi Heating Element must be fitted in a radiator or towel rail filled with a suitable liquid heating medium. The heating medium should be a glycol-based anti-freeze formulation approved by the radiator or towel rail manufacturer, and should occupy no more than 90% of the vessel's volume at room temperature, to allow space for the medium to expand when heated. If unsure, seek the advice of a qualified heating engineer.

Ecostrad cannot guarantee the heating performance of any non-Ecostrad product paired with the element. Seeking the advice of the radiator manufacturer before installing is recommended. Alternatively, a wide range of pre-filled designer radiators and towel rails is available within the Ecostrad brand.
